

Abstract

A computer program and method for the direct creation of a page having text and image. The program accepts input of text, and the input of an image and directly combines the text and image to a page in an internet common language. The invention
5 also provides a testing method which allows the retrieval of a portion of a previously created master page, provides program code to allow a student to input data in response to the retrieved portion and to directly create an answer page. Program code also allows the master page and the answer page to be retrieved and compared.

A system and method for on-line creation, storage and retrieval of books or pages
10 on books having pages with text and related images. The system can also provide for the on-line testing by the retrieval of a portion the pages of a master book and the creation of an answer page, and permit the comparison of the master and answer page.
